EXPLANATORY NOTES

Sources

The statistics appearing in this publication are compiled by the secretariat of the United Nations Economic Commission for Europe from replies to questionnaires, and other sources.

Comparability of data

The definitions of products are, in general, uniform for all years and are identical with those employed in section C of the Quarterly Bulletin of Steel Statistics for Europe. These definitions have been worked out by the ECE Steel Committee's Working Party on Statistics in collaboration with the secretariat. A brochure containing the nomenclature and definitions used can be obtained from the secretariat of the Economic Commission for Europe, Palais des Nations, Geneva.

As national and international statistics on foreign trade in steel did not in all cases distinguish between plates and sheets at 3 mm thickness, it has not always been possible to give separate information for the two products. Where possible, one-eighth of an inch has been considered sufficiently close to 3 mm not to require further adjustment; moreover, in certain cases, all coated sheets (with the exception of tinplate, which is shown separately) have been regarded as being under 3 mm thick. In this context, attention should also be drawn to the fact that data on exports of plates and sheets from Canada and the United States of America are not strictly comparable with similar data for other exporting countries, since strip of certain dimensions is classified either under plates or under sheets; moreover, plates and sheets exported from those two countries are distinguished at a thickness which is closer to the ECE breakdown between medium and heavy plates (4.75 mm).

Time period

Except in the case of Australia and India, all figures shown refer to the calendar year.

Unit of measurement

All figures are given in thousands of metric tons.

Rounding of figures

Where the data supplied were expressed in metric tons, they have been rounded off to thousands with one decimal. For this reason, there may occur in some cases an apparent slight discrepancy between the sum of the constituent items and the totals as shown.

Country nomenclature

Data supplied by the Federal Republic of Germany relate to its territory and also to West Berlin, for which separate figures are not available.
